What is OSIRIS?

Need assistance?

OPEN • SMART • INTUITIVE

OSIRIS is a current research information system (CRIS), i.e. a continuously updated directory of **researchers and their activities** at a scientific institution.

It is used to **manage, review and evaluate** the research of an institution.

More information, comprehensive documentation and an open demo online:

Intuitive User Interface
Optimised for researchers and reporters

Record, Report, Present
The comprehensive solution for all areas

Flexible and Customizable
Without writing a single line of code

Open Source
Cost-effective and transparent

The Open, Smart and Intuitive Research Information System

You do the research, OSIRIS keeps track of it

Guiding principles

OPEN

OSIRIS is freely available under the MIT licence and is open source. This means that anyone can use it free of charge and contribute to it – as long as the licence remains unchanged.

SMART

OSIRIS has many intelligent features, such as the automatic addition of activities using DOI. All this is possible thanks to the integration of many open interfaces.
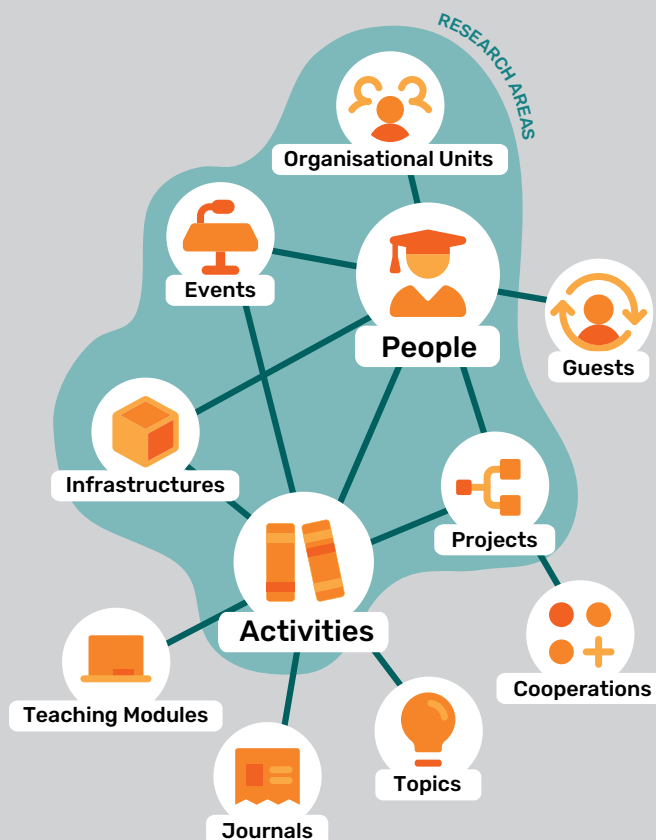

INTUITIVE

OSIRIS was created for users. It takes work off your hands wherever possible. And where work cannot be taken off your hands, OSIRIS provides support with a user-friendly interface.

Data in OSIRIS

Researchers and their activities are at the heart of everything. In OSIRIS, an activity is defined as any research output that can be attributed to individuals and a time period, e.g. publications, lectures and teaching. Each institute can configure for itself exactly what is recorded as an activity.

RESEARCH AREAS

Organisational Units

Events

People

Guests

Infrastructures

Projects

Activities

Teaching Modules

Cooperations

Journals

Topics

There is much more data in OSIRIS that can be linked to people and activities, such as projects and infrastructure. These can also be easily configured.
